

Silly Voice Story Time

Requirements

Age-appropriate storybook

Mirror (optional)

Visual aids depicting different vocal qualities (e.g., a picture of a whisper for soft)

Instructions

Introduction (5 minutes): Greet the client and explain the activity. "Today, we're going to read a story, but we're going to use silly voices! We'll practice different ways of using our voices to make the story even more fun." Show the client the visual aids of different vocal qualities (e.g., soft voice, loud voice, whisper, high-pitched voice, low-pitched voice, robot voice). Briefly review each vocal quality.

Vocal Quality Practice (5 minutes): Before starting the story, practice each vocal quality with simple words or phrases. For example, "Say 'Hello' in a whisper voice," or "Say 'I am a robot' in a robot voice." Encourage the client to look in the mirror (if provided) to observe their mouth and facial movements while producing the different vocal qualities. Provide positive reinforcement and gentle corrections as needed.

Story Reading with Silly Voices (15 minutes): Begin reading the storybook. At predetermined points (e.g., at each new character, after each paragraph, or when signaled), prompt the client to switch to a different vocal quality based on your instructions or visual cues. For example, "Let's read this page with a loud voice!" or "Can you read what the mouse says in a tiny, squeaky voice?" Encourage them to use the different vocal qualities to represent different characters or emotions in the story.

Self-Monitoring and Reflection (5 minutes): After reading a portion of the story with a silly voice, pause and ask the client to reflect on their voice. "Did you feel like you were whispering?" or "Did you feel how the voice was low or high?" Encourage self-monitoring of the vocal quality used. If reduction of phonological processes is needed, use the Silly Voice Story Time as a way to bring awareness to speech sound production within fun vocal ranges.
